

GEOTHERMAL PROS

Suitable for home heating - 400% efficient heat pumps

Totally renewable resource - heat comes from pressure underground, so always be there

Replaces fossil fuels so reduces CO2 emissions

Available everywhere on the planet

VS

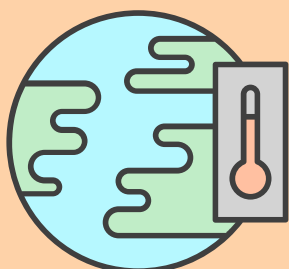

GEOTHERMAL CONS

Expensive to Install - complex machinery required

Fossil fuels needed to create machines for converting energy i.e. electricity

Hottest, therefore most efficient, temperatures are deep underground

Can de-stabilize the Earth's crust in certain locations, or release toxic gases
